Are you in danger? They're at the top of the food chain and have very diverse diets, feasting on fish, penguins, and marine mammals such as seals, sea lions, and even whales, employing teeth that can be four inches long. It catches as many as possible and then pushes out the water whilst the krill are trapped inside the bristles.

To feed, a blue whale just opens its mouth and swims towards a large group of krill.

Many thanks to AJ and to Quinn, who both suggested that we do a podcast on the eagle. The narwhal is probably most known for its distinctive tusk, or tooth, that spirals out from its mouth. We are also still doing our Kid Challenge.

They have evolved to swim up to 40 miles a day, foraging for food and exercising them out and collect them all, or just view them online! Known for their spotted fur, leopards have a tail that is nearly as long as the rest of their body.
